

# ROTADIA

## Cone bag machine

# Returning to our roots – the ROTADIA modern-day cone bag machine delivers **performance, efficiency and precision.**

W&H already developed the first cone bag machine in 1898. As a subsidiary, we are using the experience gained over the past centuries and are now presenting a new edition of this traditional machine. Equipped with the latest SERVO technology, the machine can be converted flexibly and in a time-saving manner.

The thought out perforation enables the production of precisely formed and powder-dense cone bags. Thanks to its compact design, the ROTADIA is also suitable for smaller production facilities. It is currently the most consistent cone bag machine on the market due to its long lifetime.

Of course, the ROTADIA can be equipped with an inline printer.

#### Format ranges for the ROTADIA

|            |             |                 |
|------------|-------------|-----------------|
| Bag height | 100–390 mm  | 3.94–15.35 inch |
| Roll width | max. 420 mm | max. 16.53 inch |
