

UPGRADES & RETROFITS

Systematic modernization and expansion of your machine

Why Upgrades & Retrofits?

With reliable high-quality machines, GARANT ensures long-lasting performance and first-class products. And with regular maintenance, you can expect your machine to operate easily for the next 20 years or even longer.

While innovation cycles are becoming shorter and shorter and electrical components are increasingly subject to discontinuation, market pressure is increasing. Purchasing a completely new machine is not always the most effective means of innovation. In addition, keeping a machine in operation always requires a secure supply of spare parts.

Modern retrofit solutions are an option to combine continuous further development and cost efficiency. Upgrading to the latest electrical technology ensures less downtime and more productivity.

Our experienced engineering and technical team will handle your order professionally and quickly in order

Your advantages

- ✓ Modernization of GARANT machines through innovative retrofitting
- ✓ Increased machine availability and productivity
- ✓ Long-term protection of the machine investment
- ✓ Highest quality through the use of original spare parts
- ✓ Guaranteeing the supply of spare parts

to have your machine available again for production. We can either modernize your machines on site or bring them to us in Lengerich.
